**Features:**
- Hexatech aluminum voice coil
- Vented neodymium magnet system
- Gold Plated input tags
- Shallow DPC Cone
- Reduced stray magnetic field

The MW-115s features a neodymium magnet system which provides increased sensitivity, lower QF and reduced distortion. The 54mm Hexatech aluminum voice coil is large for a unit of this size. The benefits are a high power handling capability and lack of sound level compression. The shallow cone profile provides excellent dispersion, off axis response and reduced cone breakup at high power levels.

The magnet system and chassis design help to eliminate stray magnetic fields making this unit ideal for A/V applications.
