Features:
- Hexatech aluminum voice coil
- Vented double magnet system
- Gold Plated input lugs
- Reduced stray magnetic field

The MW-168 is a 6" 88 dB bass/midrange loudspeaker. It features a large 3" aluminum Hexatech voice coil (enables large area of the cone helping to prevent cone breakup and reduce distortion at high power) and a rear-ventilated, double magnet system. The shallow profile, one-piece DFC cone and dustcap allow for good dispersion. This driver has excellent reproduction of low frequencies, clear and warm midrange and high power handling.
